

Mendeley

Mendeley

A ferramenta da Elsevier que organiza sua pesquisa e te apoia na escrita científica.

Agosto, 2022

ELSEVIER

O que é o Mendeley?

Mendeley é um software gratuito de gestão de referências criado para apoiar pesquisadores. Ele pode ajudar a:

Organize

Construa e organize sua biblioteca de referências

Leia e anote

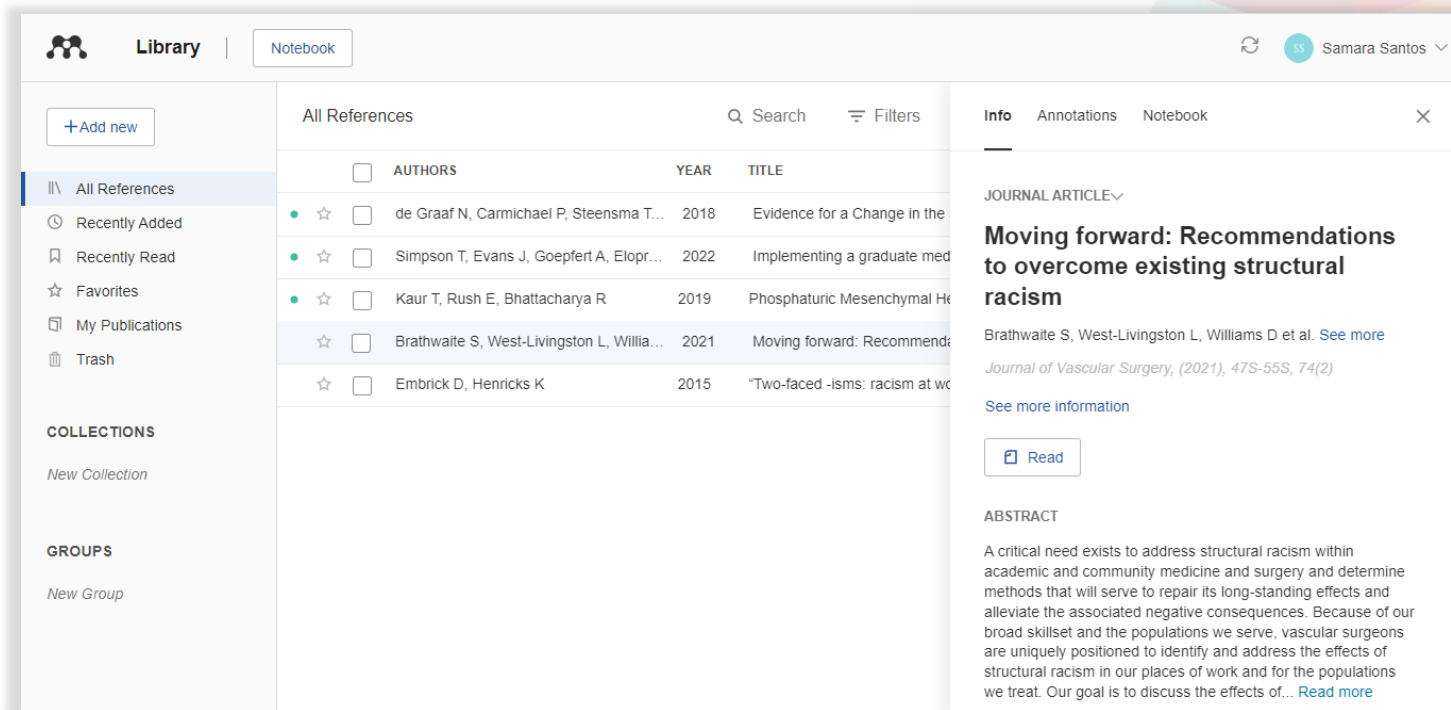

Veja todas os seus insights em um só lugar

Cite

Cite referências enquanto você escreve e cria bibliografias

Colabore

Compartilhe referências e insights com uma equipe e anote em tempo real

The screenshot displays the Mendeley Library interface. On the left, there is a sidebar with navigation options: '+ Add new', 'All References', 'Recently Added', 'Recently Read', 'Favorites', 'My Publications', and 'Trash'. Below these are sections for 'COLLECTIONS' (New Collection) and 'GROUPS' (New Group). The main area shows a table of 'All References' with columns for 'AUTHORS', 'YEAR', and 'TITLE'. The table lists several references, with the one selected being 'Moving forward: Recommendations to overcome existing structural racism' by Brathwaite S, West-Livingston L, Williams D et al. (2021). On the right, a detailed view of this article is shown, including the title, authors, journal information, and an abstract.

JOURNAL ARTICLE

Moving forward: Recommendations to overcome existing structural racism

Brathwaite S, West-Livingston L, Williams D et al. [See more](#)
Journal of Vascular Surgery, (2021), 47S-55S, 74(2)

[See more information](#)

[Read](#)

ABSTRACT

A critical need exists to address structural racism within academic and community medicine and surgery and determine methods that will serve to repair its long-standing effects and alleviate the associated negative consequences. Because of our broad skillset and the populations we serve, vascular surgeons are uniquely positioned to identify and address the effects of structural racism in our places of work and for the populations we treat. Our goal is to discuss the effects of... [Read more](#)

Construa e organize sua biblioteca de referências.

Faça seu login no Mendeley

The screenshot shows the Mendeley Discovery homepage. At the top left is the Mendeley logo and name. At the top right are navigation links: Solutions, Support, Sign In, Create account, and a Download button. The main content area has a dark blue background with a starry pattern. It features the text 'I DISCOVERY' with the Mendeley logo between the 'I' and 'DISCOVERY'. Below this is the tagline 'Mendeley brings your research to life, so you can make an impact on tomorrow'. A search bar is present with the placeholder text 'Search for articles' and a blue 'Search' button. Below the search bar, it says 'Search over 100 million cross-publisher articles and counting'. Underneath that, it lists 'Popular searches: COVID-19 Bioenergy Obesity'. At the bottom center is a red button that says 'Create a free account'.

Mendeley Reference Manager

The screenshot displays the Mendeley Reference Manager interface. At the top, there is a navigation bar with the Mendeley logo, the word "Library", and a "Notebook" tab. On the right side of the top bar, there is a refresh icon, a user profile picture, and the name "Thomas".

Below the navigation bar, there is a sidebar on the left with a "+ Add new" button and a list of navigation options: "All References" (selected), "Recently Added", "Recently Read", "Favorites", "My Publications", and "Trash". Under "COLLECTIONS", there are "Astrophysics", "Metamorphic Principles", and "Thesis Papers", with a "New collection" link. Under "PRIVATE GROUPS", there are "Clinical Trial 2019", "UCL Medicine Lab", and a "New private group" link. At the bottom of the sidebar, there is a "New Group" link.

The main area shows a table titled "All References" with a search bar on the right. The table has columns for "AUTHORS", "YEAR", "TITLE", "SOURCE", "ADDED", and "FILE". Each row represents a reference and includes a checkbox, a star icon, and a document icon.

Mendeley Reference Manager

The screenshot displays the Mendeley Reference Manager interface. At the top, there is a navigation bar with 'Library' and 'Notebook' tabs, a search bar, and a user profile for 'Janie Gray'. The left sidebar contains navigation options: '+Add new', 'All References', 'Recently Added', 'Recently Read', 'Favorites', 'My Publications', and 'Trash'. Below these are 'COLLECTIONS' (Air Pollution, Environmental Pollution, Thesis 2021, New Collection) and 'PRIVATE GROUPS' (New Group).

The main area shows a list of references under the heading 'All References'. The table has columns for 'AUTHORS', 'YEAR', and 'TITLE'. The first entry is highlighted:

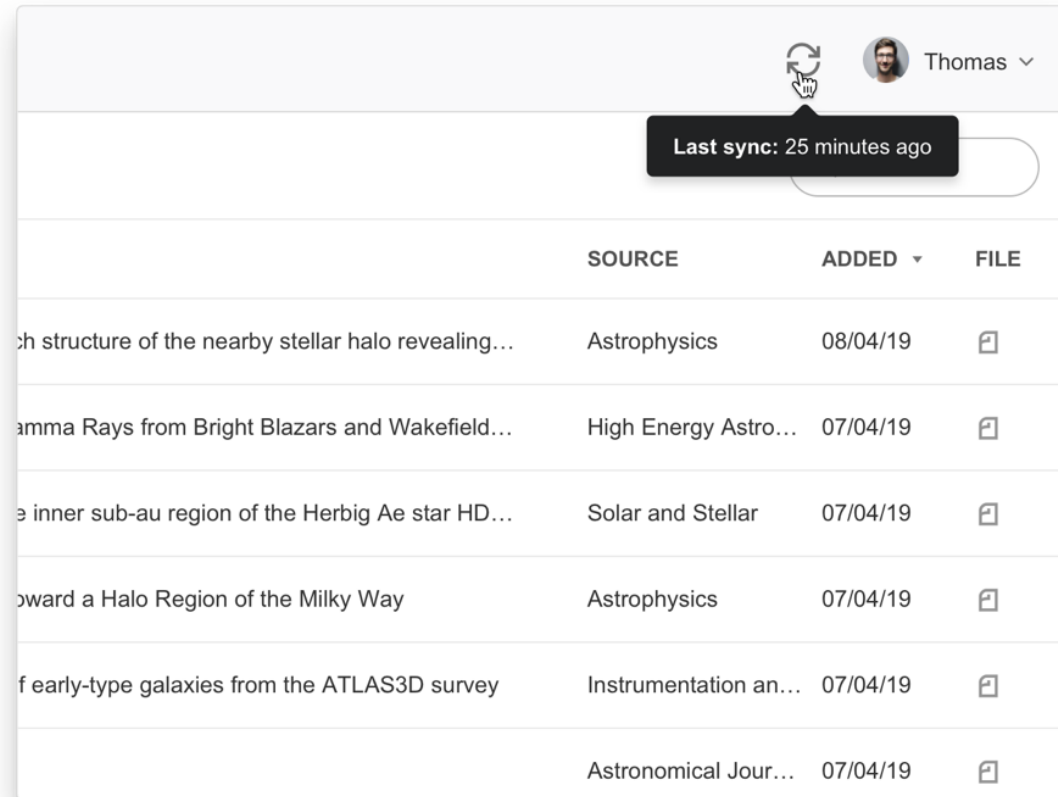

AUTHORS	YEAR	TITLE
Wang L, Dai Y, Kong D	2021	Air pollution and employee treatment
Morawska L, Zhu T, Liu N, Amouei Tork...	2021	The state of science on severe air p

Adicionando as referências do seu computador

- Selecione arquivo(s) para adicionar do seu computador
- Adicione as referências manualmente
- Importe de outro gestor de referências, ou BibTeX

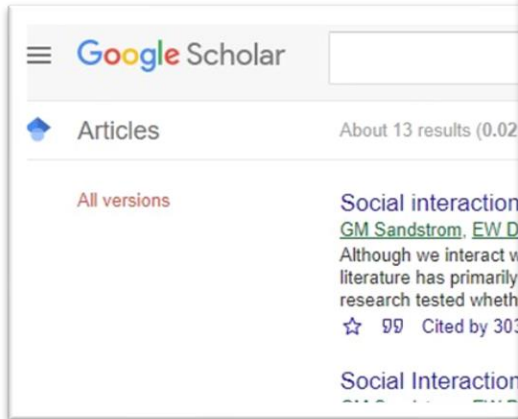

The screenshot shows the Mendeley Library interface. The 'Add new' button is highlighted, and a dropdown menu is open. The menu options are: 'File(s) from computer', 'Add entry manually', 'Import library', 'Favorites', 'My Publications', and 'Trash'. A sub-menu is open for 'Import library', showing options: 'BibTeX (*.bib)', 'Endnote XML (*.xml)', and 'RIS (*.ris)'. The main interface shows a table of 'All References' with columns for 'AUTHORS', 'YEAR', and 'TITLE'. The table contains several entries, including 'Amina Helmi, Jovan Veljan' (2017), 'A. Kospal, et al.' (2017), 'F. Spoto, P. Tanga, et al.' (2015), 'S. Bouquillon, J. Desmars,' (2016), and 'M. Fumagalli, A. Boselli et al.' (2017).

Adicionando referências de recursos da internet: Mendeley Web Importer

Navegue para qualquer site de índice ou publicação

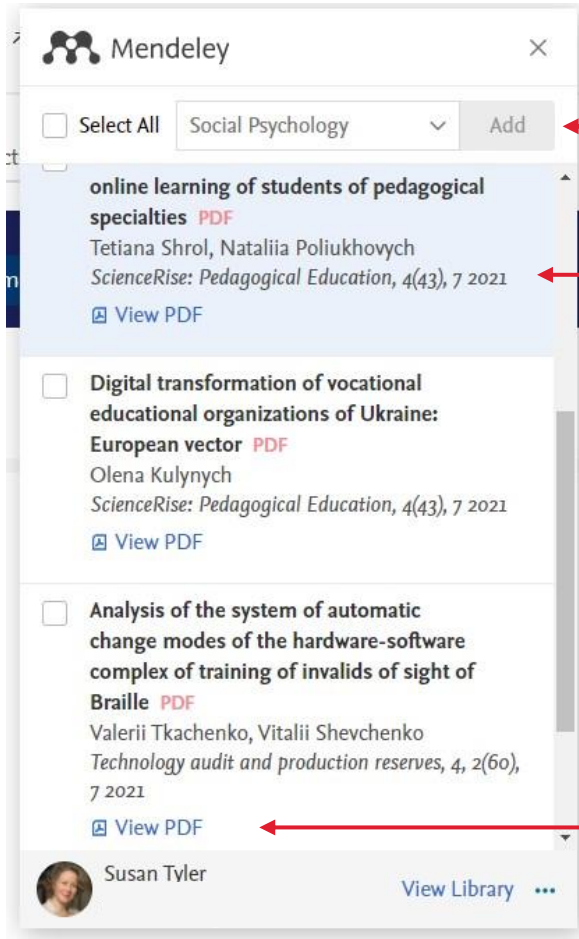

Selecione o ícone Mendeley Web Importer. Ele identifica referências que você pode importar para sua biblioteca

A screenshot of the SSRN website (ssrn.com/index.cfm/en/commrn/) showing the 'Welcome to CommRN' header and a list of articles under 'Communication Studies'. A Mendeley Web Importer overlay is positioned on the right side of the browser window. The overlay has a search bar and a list of detected references. A red arrow points from the text 'Selecione o ícone Mendeley Web Importer...' to the Mendeley icon in the browser's toolbar. The Mendeley overlay shows two references: 'Digital transformation of vocational educational organizations of Ukraine: European vector PDF' and 'Analysis of the system of automatic change modes of the hardware-software complex of training of invalids of sight of Braille PDF'. Below these, there is a 'WEB PAGE' section with the reference 'CommRN :: SSRN'.

Navegue para qualquer site de índice ou publicação

Adicionando referências com Mendeley Web Importer

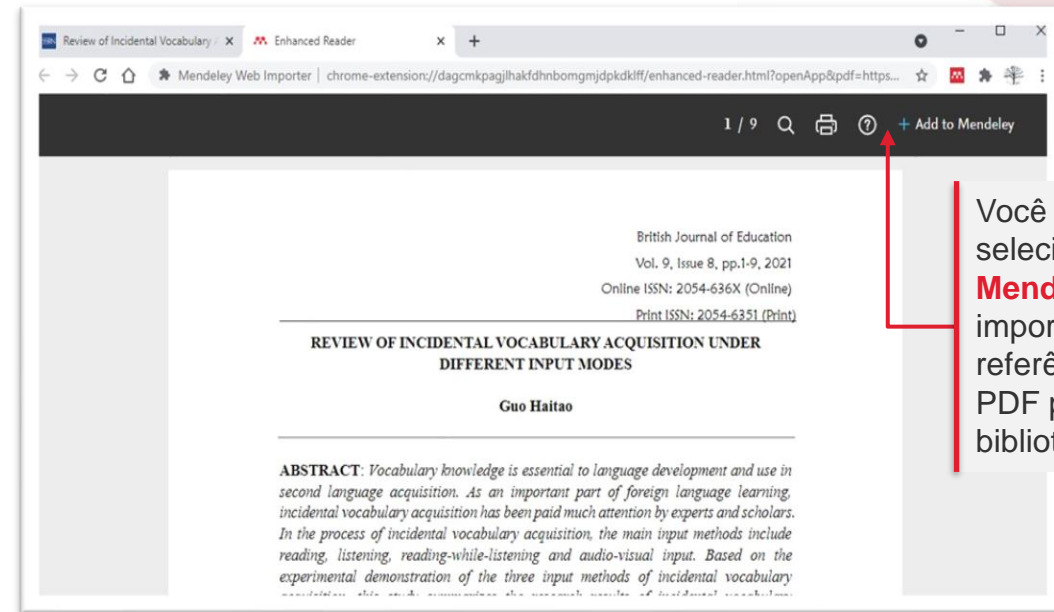

Selecione uma coleção para adicionar se desejar

Selecione uma referência se quiser editar os metadados antes de importar

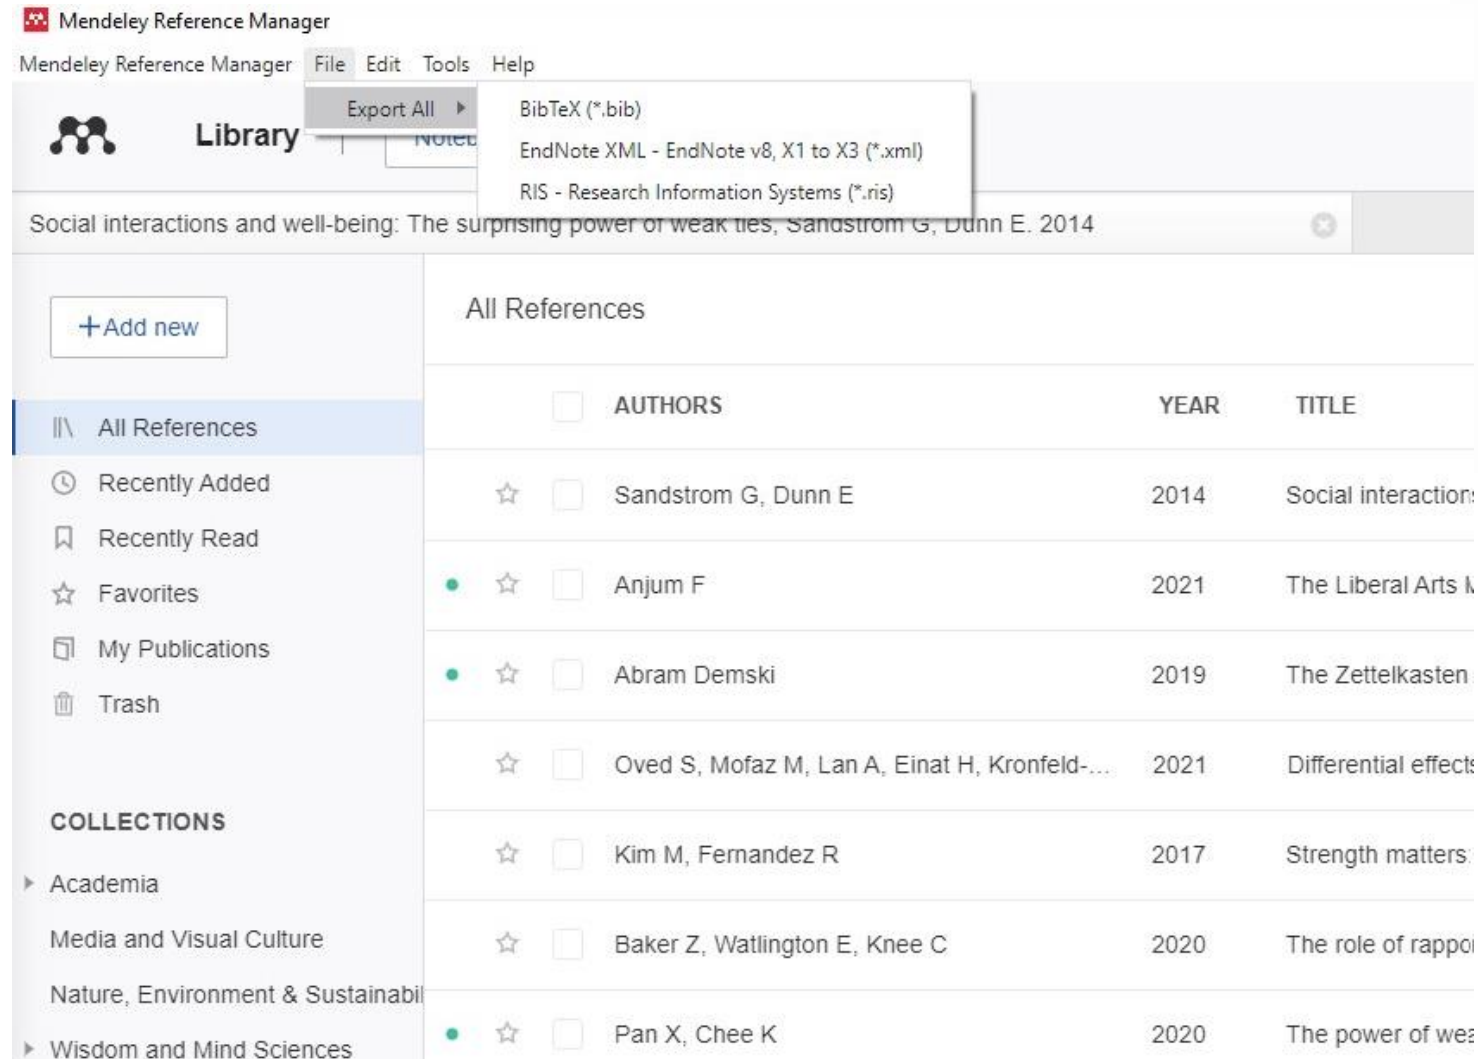

Selecione **View PDF** para importar o artigo, juntamente com a referência

Quando você seleciona “**View PDF**”, o artigo abre em uma nova guia em seu navegador

Você também pode selecionar **+Add to Mendeley** aqui para importar tanto a referência quanto PDF para sua biblioteca

Exportando referências

The screenshot shows the Mendeley Reference Manager application. The 'Export All' menu is open, displaying options: BibTeX (*.bib), EndNote XML - EndNote v8, X1 to X3 (*.xml), and RIS - Research Information Systems (*.ris). The main window displays a list of references under the heading 'All References'. The left sidebar contains navigation options like '+Add new', 'All References', 'Recently Added', 'Recently Read', 'Favorites', 'My Publications', and 'Trash'. Below these are 'COLLECTIONS' such as 'Academia', 'Media and Visual Culture', 'Nature, Environment & Sustainability', and 'Wisdom and Mind Sciences'. The reference list includes columns for selection, authors, year, and title.

The screenshot displays the Mendeley library interface. At the top, there is a navigation bar with the Mendeley logo, the word "Library", and a "Notebook" tab. On the right side of the top bar, there is a refresh icon, a user profile picture, and the name "Thomas". Below the navigation bar, three document tabs are visible: "Implications of climate change on landslide hazard in Central Italy", "Landslides in a changing climate", and "Evaluation of the Effects of Climate Changes on Landslide Activity ...". The main content area is split into two columns. The left column shows a document viewer with a toolbar at the top containing a search icon, a pencil icon, a comment icon, a yellow highlighter icon, and a page indicator "1 / 318". The text in the viewer is from a scientific paper, discussing climate change impacts on landslides. The right column is an "Annotations" panel with a close button (X). It contains three annotation boxes, each with a timestamp "21:48" and a note: "Interesting information. Must read later", "research why did this increase happen", and "share this with the team for later analysis".

the groundwater level of 8 mm per decade. They further calculated a decrease in the displacement rate of the earthflow in the range 1.5–3.0 mm per decade, leading to a maximum total displacement of 77 to 86 cm in the 51-year period 2010–2060. A relevant conclusion of the study was that the expected climate change did not play a relevant role in the dynamic behavior of the slow landslide in clay, due to the moderate decrease in the amount of annual precipitation and limited effect of temperature increase on evaporation and groundwater level.

Adopting the same simulation chain and global and regional climate models, Rianna et al. (2014) investigated a slow, deep-seated landslide in clay affecting the NE slope of the Orvieto hill, Umbria, central Italy. A 30-year-long monitoring record of the slide was used to establish a link between rainfall and rate of landslide movement (Tommasi et al., 2006), including a distinct reduction in the rate related to a decreasing trend in the maximum annual 4-month cumulated rainfall. Coupling historical data with high-resolution (up to 8 km) climate projections provided by COSMO-CLM for two IPCC emission scenarios (RCP4.5 and RCP8.5, Meinshausen et al., 2011), the authors obtained a quantitative estimate of the expected slope displacement until the end of 21st century, and concluded that the predicted local climate changes will be responsible for a significant deceleration of the landslide movement.

A few investigators used the physically-based modelling approach to evaluate the effects of climate change on populations of mainly shallow landslides. Chang and Chiang (2011) determined a worst-case-scenario for shallow landslide occurrence in a mountain catchment of Taiwan in the 21st century. From 21 GCMs, they selected an optimal GCM (CGCM2.3.2, Yukimoto et al., 2006), and the related monthly precipitation. They downscaled annual 24-h rainfall maxima (considered a good predictor for typhoons), and used it as input for the calculation of the stability conditions of a slope, measured by the factor of safety. They estimated an increase of about 15% in the average annual maximum rainfall from 1960 to 2008 to 2010–2099 and, as a result, a 12% increase in the average total unstable area between the considered periods.

Melchiorre and Frattini (2012) coupled a hydrological-stability model to eleven GCM scenarios and Monte Carlo simulations to evaluate changes in slope stability conditions of shallow landslides in central Norway. The GCM data were used to evaluate soil saturation conditions and pressure heads through the hydrological model, and an infinite slope stability model used to compute the factor of safety. They found diverging slope stability results for the future scenarios, and concluded

year 2100. Comparing this result with thresholds calibrated on historical data in the period 1963–2007 they suggested an increase in the total number of debris flows of approximately 30% by the end of the 21st century.

Jomelli et al. (2009) investigated the impact of future climate change on the geographical and temporal occurrence of debris flows in the Massif des Ecrins, in the French Alps. They used downscaled rainfall and temperature data obtained from three simulations of the ARPEGE GCM (Déqué et al., 1994), under the A2 IPPC scenario (Houghton et al., 2001), for the 30-year future period 2070–2099. The projections showed a decrease in the number of intense rainfall events and an increase in temperature, compared to the calibration period 1970–1999. Given the decrease in the number of intense rainfall events, the authors estimated a 30% reduction in the temporal occurrence of debris flows, and given the increase in temperature, they estimated a shift of the 0 °C isotherm to a higher elevation, which was expected to result in a 20% reduction in the number of slopes affected by shallow slope instabilities, and a shift in the elevation of the areas susceptible to debris flow initiation.

Turkington et al. (2016) predicted trends in debris flows activity, measured by the number of days with debris flows, for the period 2010–2099, in the Barcelonnette valley, France, and the Fella catchment, Italy, under the RCP4.5 and RCP8.5 scenarios. For their experiment, they used a probabilistic approach to determine a dependence between rainfall events and debris flow occurrence (Turkington et al., 2014), and bias-corrected climate projections of two meteorological proxies i.e., daily rainfall from 1950 to 2009, and Convective Available Potential Energy (CAPE) from 1979 and 2011. Using an ensemble of 32 climate scenarios (from 3 RCMs and up to 6 GCMs, Jacob et al., 2014) for the rainfall proxy, and eight climate scenarios (from 4 GCMs, Taylor et al., 2011) for the CAPE proxy, they found an increase of up to 6% per decade in the number of days with debris flows towards the end of 21st century, in both study areas, and acknowledged that their projections depended strongly on the proxy used, and to a lesser extent to the GCM, RCM, and the RCP scenarios.

Lastly, Ciabatta et al. (2016) investigated the impact of climate change on landslide occurrence in Umbria, central Italy, using GCM projections applied to an existing regional landslide early warning system (Ponziani et al., 2012). First, they assessed the performance of the system using a catalogue of 235 shallow landslides in Umbria from 1990 to 2013. Next, they exploited hourly rainfall and temperature records obtained from

FOR MORE than a decade, USER EXPERIENCE (UX) has grown into a core action (HCI). Practitioners and researchers from a wide range of disciplines have been exploring the concept. However, despite many attempts to understand, define, and measure the concept, whether a consensus has been reached on this concept remains a willingness to explore the concept of UX to maturity, a replication of the concept is needed. The main goal of the present study is to get a better understanding of the concept of UX and to analyze potential evolutions over time. The study is a practical use of the concept. As both practical and theoretical importance for whoever designs interactive systems, the exploratory study is a valuable step toward continual improvement of UX activities. The study is conducted amongst 758 practitioners and researchers from 35 nationalities. It is a cross-sectional study. The concept is understood and used throughout the world. Amongst international practitioners and researchers, differences were observed according to the geographical location and background.

1. Introduction

Some concepts in the field of HCI are commonly used by practitioners even if a lack of empirical research has prevented their full understanding and impact. User experience (UX) could be one of the fashion and fuzzy terms that is increasingly used even though it has not reached yet regarding its definition. The initial question is: what is the added value of UX? Its benefits, such as usability, ergonomics, or user acceptance (Barcellona & Bastien, 2009), some also agree that UX is a "truly extended and distinct perspective on the quality of interactive products" (Hassenzahl, 2008).

Since the 2000s, the concept of UX is widely used but understood in different ways (Law, Roto, Hassenzahl, Vermeeren, &

be explained by the fact that UX is a combination of fuzzy and dynamic concepts combining several HCI notions. Understanding UX is an important challenge for HCI as it is a step toward UX measurement and design (Fent & Blythe, 2007). As stated by Fent & Blythe (2007), "you cannot manage what you cannot measure, and you cannot measure what you cannot define" (p. 14). The UX Manifesto, published in 2007, consisted in answering the question: "What is UX?" Studying the basic concepts and a number of studies have tried to meet this goal. Several attempts to understand UX have been made. Several approaches: reviewing UX research

Mendeley Notebook

The screenshot displays the Mendeley Notebook interface. On the left, a document page titled "Implications of climate change on landslide hazard in Central Italy" is open. A context menu is overlaid on the text "the intamous smog event of the driest and best-known events of comm", offering options like "Change color", "Add to Notebook", and "Delete Annotation".

In the center, a sidebar titled "Notes on neuronal navigation" lists notebook pages: "landslides and climate change", "Untitled", and "es in a changing climate". A red arrow points to the "landslides and climate change" page.

On the right, another document page titled "Evaluation of the Effects of Climate Changes on Landslide Activity ..." is open. A red arrow points to the "Notebook" tab in the document's header.

Red arrows from text boxes point to these specific interface elements: the context menu, the sidebar page, the document tab, and the notebook page.

ABSTRACT

Coronavirus disease (COVID-19) is caused by SARS-COV2 and represents the causative agent of a potentially fatal disease that is of great global public health concern. Based on the large number of infected people that were exposed to the wet animal market in Wuhan City, China, it is suggested that this is likely the zoonotic origin of COVID-19. Person-to-person transmission of COVID-19 infection led to the isolation of patients that were subsequently administered a variety of treatments. Extensive measures to reduce person-to-person transmission of COVID-19 have been implemented to control the current outbreak. Special attention and efforts to protect or reduce transmission should be applied in susceptible populations including children, health care providers, and elderly people. In this review, we
